DataSet Cleaning and Preparation Report

...prepared by Shukura Adebayo Salawudeen

Preparing Raw Marketing Data for Analysis

Process Summary

Objective:

- Clean and prepare raw product dataset
- Improve data quality for analysis
- Create SEO-friendly short_title

Key columns:

- Product_id
- Product_title
- Description
- Product_type_id
- Product_length

Data Issues Identified

Key problems found:

- Duplicate records
- Inconsistent text format and extra spacing
- Unwanted text (html tags, symbols)
- Unknown language character
- Long and unstructured titles and details
- Blank spaces (Bullet_point, Description, Product_type ID)

Data cleaning

Cleaning steps:

- Removed duplicates data
- Handled blank spaces (using the unavailable title) to avoid errors during analysis
- Standardized text (Case, spacing, symbols, html tags)
- Reduced extra long title, description and bullet_points into reasonable details
- Titled Unknown language character into Product unknown language content, for consistency during analysis

Data transformation

Transformations:

- **Extracted key product info**
- **Removed Unnecessary words**
- **Limited to 70 characters**

Outcome of the cleaning process

Results:

- Clean, structured dataset
- Improved readability and consistency
- SEO-optimized short_title column added
- New short_title length gotten
- Descriptive Statistics of Product_ID, type_id, Products lengths
